BURBERRY PRORSUM NICKEL SPIKED NECKLACE

"This shape of this necklace recalls the spire of a towering skyscraper. Specifically, I think of Frank Lloyd Wright's plan for a majestic tower that would reach a mile high. Though it was never built, the building's proportion and style is one of the best and has inspired many designs since its conception in 1956. The metallic cladding would have given it the appearance of a beautiful piece of jewelry."

LOUIS VUITTON HAT

"This hat's playful yet sculptural shape immediately reminds me of the Guggenheim Museum in Bilbao, Spain. Frank Gehry's sweeping and dramatic design is at once organic and technological. It also is interesting that Gehry created the "next generation Guggenheim" by visually referencing the spiral sculptural shape that Frank Lloyd Wright created in New York."

Strappy sandals and bridge suspension cables, triangular gems and the Great Pyramids. If you've noticed some structural similarities between the accessories in your closet and the prominent edifices in your city, you're right.

To guide us in making our educated comparisons, we chatted with architect Jeffrey Hutchinson, who has designed retail spaces for such fashion houses as Barneys New York, Donna Karan, Theory, Narciso Rodriguez, and Ralph Lauren. With his aid, we've seen how inventive hats resemble the walls of wraparound buildings and how innovative necklaces mimic tough and static skyscrapers.

Architectural masterpieces are big, beautiful, and sure to be admired for years to come, and as their elements continue creeping up on the runways, it seems fashion designers have realized that the rules for creating great structures can be the same for creating great accessories.
